                                                                                                                                                                                                                                                          The invention relates to a novel method for identifying a compound capable of treating a haematological disorder which comprises combining a compound to be tested with a specific polypeptide under conditions suitable for binding of the test compound to the polypeptide. The method of the invention has haematological and cytostatic applications and may be useful for identifying compounds for treating a haematological disorder associated with erythroid cells e.g. anaemia and erythrocytosis, bone marrow e.g. leukaemia, platelets e.g. thrombosytopenia and thrombosis or B-cells and T-cells e.g. neutropenia. The compounds identified may be utilised during gene therapy procedures. The current sequence is that of a human haematological disorder-related cDNA of the

ò

The invention relates to human homologues of neuronal apoptosis regulated candidate (NARC) nucleic acid molecules and proteins derived from rat candidate (NARC) nucleic acid molecules and programmed cell death libraries. The nucleic acids of the invention are useful for assaying the presence of a nucleic acid molecule and for chromosome mapping. They are also used in gene therapy and antisense therapy. The NARC sequences are useful for treating central nervous system disorders and disorders involving aberrant apoptosis, for inducing an immune response and for isolating binding partners. Diseases treated include spleen disorders (e.g. tuberculosis and congestive splenomegaly), lung disorders (e.g. tuberculosis and congestive splenomegaly), lung disorders (e.g. tuberculosis and congestive splenomegaly), lung disorders (e.g. tuberculosis and congestive condpasture's syndrome, infectious disorders (e.g. viral jaundice and hydrocephalus), heart disorders (e.g. viral concephalus), heart disorders (e.g. viral magina and myocardial infarction), kidney disorders (e.g. cysts and splenomegaly), skeletal muscle disorders (e.g. tumours) and pancreatic shuman neuronal apoptosis regulated candidate (NARC) 16B DNA Rat brain polypeptides, nucleic acids and antibodies, useful for diagnosis and treatment of central nervous system disorders and disorders associated with aberrant apoptosis. WPI; 2003-058503/05.

P-PSDB; ABB84606.

Novel isolated programmed cell death-related polypeptide, NARC10 and NARC16, useful for treating disorders associated with abnormal apoptotic process e.g. Alzheimer's disease, cancer, myocardial infarction, stroke.

Claim 1; Fig 4A-C; 123pp; English

munications are actual control of the manical manufactory. Cerestropic, neuroprotective, antidabetic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, controlic, neuroprotective, antidabetic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, controlic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, immunostimulant, anticonvulsant, tranquiliser, hypotensive and can be used in gene therapy. The products of the invention can be used to modulate NARCHO or NARCHO polyucleotides, to map NARC genes on a chromosome, e.g. to locate gene conjour associated with genetic disease or to associate NARCHO or NARCHO cypolyucleotides, and are therefore useful for modulating the apoptoric process, and are therefore useful for modulating and treating disorders associated with increased apoptosis, inhibition of apoptosis or distruptions in cell cycle. For regulating cellular functions including process, and are therefore useful for modulating, and treating disorders associated with abnormally, phosphate homeostasis and the creating disorders associated with abnormally low rate or abnormally high crate of apoptosis e.g. cancers including follicular lymphomas, carcinomas with p53 mutations, or hormone-dependent tumours, autoimmune disorders including systemic lupus expthematosus, diabetes, graft rejection, including acquired immunodeficiency syndrome (Including Alzheimer's disease, Parkinson's disease, controled of pigmentosa, and cerebellar degeneration), myelodysplastic syndromes (Including Alzheimer's disease, parkinson's disease, chronic cardiomyopathy and valvular heart disease, paparatic syndromes (including Alzheimer's disease, paparatic syndromes (including Alzheimer's disease, paparatic syndromes (including Alzheimer's disease, paparatic syndromes (including Alzheimer's disease, paparatic syndromes (including Alzheimer's disease, paparatic syndromes (including alzheimer's disease, paparatic syndromes contropaenia, and myelodysplastic syndromes cardiomyopathy and valvullar heart disease, paparat This invention describes novel cell death-related polypeptides NARC10 and NARC16, located on chromosome 4q11-4q21 and which have cardiant, antiHIV, immunosuppressive, dermatological, antiinflammatory, cerebroprotective,

                                                                                             셤
                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer; (b) monitoring the efficacy of a therapy for inhibit ing prostate cancer in a patient; (d) assessing the efficacy of an therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate calcardingent prostate cancer in a patient; (g) assessing the aggressiveness or indolence of prostate cancer in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          460
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncancerus) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the conceptions ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention. The patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the carpression levels indicates ovarian cancer. The level of expression of a corresponds to a secreted protein or to a transcribed marker is assessed by detecting the presence in the sample, a protein or protein cancer is assessed by detecting the presence in the sample, a protein or protein cancer is assessed by detecting the presence of polymucleotide or its portion. The level of expression of a corresponding to the marker. The presence of protein or protein cancer is assessed by detecting the presence of protein or protein fragment is detected using an antibody that specifically binds with the corresponding to the marker. The level of expression of the marker is assessed by detecting the presence of a transcribed corresponding the marker or anneals with a portion of the polymucleotide which anneals with the marker or anneals with a portion of protein is also become a farmacribed or marker is a second for morniparing the marker or anneals with a portion of protein or p cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer. marker is also used for monitoring the progression of ovarian cancer in patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the marker in a patient time and comparing the level of expression. The method at a subsequent using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer This sequence represents a human ovarian cancer DNA marker of the invention. The present sequence is of cDNA clone DNA327983 encoding novel human PRO polypeptide PRO81903. The invention provides newly identified and colypeptide sequences encoding polypeptides referred to as PRO isolated diseases microarray analysis showed that DNA327983 is upcompared diseases microarray analysis showed that DNA327983 is upcompared to newless patients, up-regulated 1.3-fold in lesional skin as compared to non-lesional skin from provises patients as compared to normal colon samples from Crohn's compared to normal colon and up-regulated 1.3-fold in Colon and the blood cells from rheumatoid arthritis patients as compared to those from healthy donors. It is also down-regulated 1.5-fold upon activation of corpus with CD28 or ICAM and down-regulated 1.5-fold upon activation of monocytes with LPS. PRO8393 can be used in a claimed corpus in the compound that inhibits expression of the generator of identifying a compound that inhibits expression of the generator of identifiation compound is especially an antisense nucleic cof rheumatoid arthritis. Crohn's disease and psoriasis. A vector of rhematoid arthritis. Crohn's disease and psoriasis. A vector comprising the present nucleic acid can be used to transform a host cell, especially a CHO cell, Escherichia coli or yeast, for production of the corpus or production of the corpus or the coll or production of the corpus or coll or production of the corpus or collaboration or displaced conditions are collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collaborated collab

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABW00010-ABW22213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer; (b) monitoring the progression of nihibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; determining whether prostate cancer has metastasized in a patient; (l) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                 cancer; cytostatic; carcinogen; pharmacodyanamic marker;
marker; gene; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                221 ATGACACCTTCTCAGGTTGCCTTTGAAATAAGAGGAACTCTTTTACCAGGAGAAGTTTTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            113
                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to bone marrow expressed polynucleotides and proteins. These sequences can be used in the treatment of inflammatory conditions (eg arthritis, Crohn's disease), cancer, central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, Parkinson's and Huntington's diseases, spinal cord disorders, head trauma, cerebrovascular diseases, myeloid and lymphoid cell disorders, platelet disorders, stem cell disorders, bone degenerative disorders, autoimmune disorders, for example multiple solerosis, diabetes and arthritis, viral and bacterial infections, allergies and blood coagulation disorders. The present sequence is a DNA allergies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11

Rat brain polypeptides, nucleic acids and antibodies, useful for diagnosis and treatment of central nervous system disorders and disorders associated with aberrant apoptosis.

Claim 1; Page 146; 161pp; English.

The invention relates to human homologues of neuronal apoptosis regulated CC candidate (NARC) nucleic acid molecules and proteins derived from rat candidate (NARC) nucleic acid molecules and proteins derived from rat brain and programmed cell death libraries. The nucleic acids of the convention are useful for assaying the presence of a nucleic acid molecule and for chromosome mapping. They are also used in gene therapy and can tisense therapy. The NARC sequences are useful for treating central nervous system disorders and disorders involving aberrant apoptosis, for inducing an immune response and for isolating binding partners. Diseases treated include spleen disorders (e.g. tuberculosis and congestive congopasture's syndrome and bronchial asthma), liver disorders (e.g. viral congopasture's syndrome and bronchial asthma), liver disorders (e.g. viral conceptable), infectious disorders (e.g. viral conceptable), heart disorders (e.g. heart failure, encephalopathy and hydrocephalus), heart disorders (e.g. heart failure, capping and myocardial infarction), kidney disorders (e.g. carebrasione) and pancreatic syphilis), skeletal muscle disorders (e.g. tumours) and pancreatic is human contronal apoptosis regulated candidate (NARC) 98 DNA

glomerulonephritis, osteoporosis, AIDS (acquired immunedeficiency syndrome), Parkinson's disease, Alzheimer's disease, stroke and dermatitis. These may also be used in drug screening. The invention also useful in gene therapy. The present sequence is human neuronal apoptosis regulated candidate (NARC) cDNA.

```
New isolated nucleic acid molecules and polypeptides (e.g. 27411, 23413, 25438, 23553, MRKC Scl or NARC 1) useful for diagnosing, preventing or treating disorders associated with the protein, e.g. cancer, atherosclerosis or AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides isolated nucleic acid molecules and proteins designated 27411, 23413, 22438, 2353, 25278, 26212, NARC SCI, NARC 10, NARC 11, NARC 11, NARC 11, NARC 11, NARC 11, NARC 14, NARC 26, NARC 27, NARC 27, NARC 28, NARC 30, NARC 5, NARC 16, NARC 19, NARC 20, NARC 26, NARC 27, NARC 28, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, NARC 10, N

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                     US-10-047-855-3

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LIANL at: http://image.llnl.gov Series: IRAK Plate: 34 Row: a Column: 18
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 25901061.

It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence

It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                     Department of Genetics, Washington

It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Center: Washington University Genome Sequencing Center Center code: WUGSC

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

BLACK BORDERS

IMAGE CUT OFF AT TOP, BOTTOM OR SIDES

FADED TEXT OR DRAWING

BLURRED OR ILLEGIBLE TEXT OR DRAWING

SKEWED/SLANTED IMAGES

COLOR OR BLACK AND WHITE PHOTOGRAPHS

GRAY SCALE DOCUMENTS

LINES OR MARKS ON ORIGINAL DOCUMENT

REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY

IMAGES ARE BEST AVAILABLE COPY.

☐ OTHER: _

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
